## REACH:

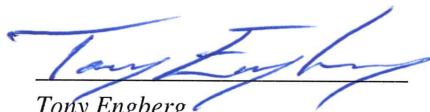

### Registration, Evaluation, Authorisation and Restriction of Chemicals.

REACH requires to register all chemical substances supplied within the EU and to evaluate their potential hazards to human beings and the environment.

Konga Mekaniska Verkstad AB

Is in terms of mentioned above regulation a “downstream user” as a product manufacturer using low quantities and therefore not subject to registration. And we insist on written confirmations from our suppliers that all chemical components meet the registration requirements.

Konga Mekaniska Verkstad AB delivers exclusively non-chemical products. These contain no substances intended to be released according to REACH in normal or reasonably predictable conditions of use.
